

Snoring c·a·r·e

What would you do for a good night sleep?

Snoring disturbs the partner and damages effects snorer's health

Worldwide, millions of people suffer from snoring and deprive sleeping from their partners. In addition to lowering the life quality of the individual and its spouse, snoring also causes health issues such as high blood pressure, which raises the chances of a stroke, heart attack and rapid aging.

Why does snoring and sleep apnea occur?

During sleep, the muscles of the throat relax, the tongue falls backward and the throat becomes narrow and "floppy". During respiration, the walls of the throat begin to vibrate. The narrower the airway becomes, the greater the vibration and the louder the snoring. Sometimes the walls of the throat collapse completely so that it is completely occluded, creating a condition called OSA - Obstructive Sleep Apnea (cessation of breathing).

Snoring Care™ Benefits:

- Reduces snoring up to 75% within the first night
- User friendly, Just "Plug and Play".
- Peaceful sleep for the user and its partner.
- Completely safe with no side effects

How Does Snoring Care™ Work?

Snoring Care™ monitors the user's breathing and snoring by using innovative sensors that are placed under the mattress.

Upon snoring and its influence on the user's breathing, **Snoring Care™ sends a gentle biofeedback to the user, which increases the muscle tonus in the throat.**

This unnoticed activity helps keeping the air passage open and reduces snoring and breathing disorders dramatically while improving the quality of sleep.

About Nexense®

Nexense® is a leading R&D company founded in 2001 partly held by GE Healthcare.

Nexense's sensors technology was adopted by Fortune 500 companies including: Johnson & Johnson, Samsung, Ford and General Motors.

Snoring Care™ is one of Nexense's innovative under the mattress product which complies with ISO-9001: 2000 and ISO-13485: 2003.
